highly scalable

✓ On-premise
or SaaS

Strong performance and stability

Thanks to a modern tech stack, OpenCloud works faster and more reliably than other cloud solutions. The highly scalable microservice architecture and the unique, database-free storage concept offer reliability without the need for extensive system maintenance. This means: maximum performance, stability and speed, no matter how big your team gets.

Efficient teamwork

OpenCloud is the file management and file sharing solution for high-performance teams that want to organize, exchange and collaborate on files quickly and in real time. Person-independent area structures (Spaces) and cross-device functionality ensure constant workflow management.

Easy to use

Thanks to intuitive use, OpenCloud is immediately understandable for new users. An integrated office suite enables seamless collaboration. IT administrators benefit from easy installation, reliable operation and integration into existing IT infrastructures.

Digital sovereignty

On-premises in your own data center or as SaaS through selected partners – OpenCloud offers full data sovereignty in line with the zero trust principle. The future-proof, sustainable and resource-efficient open-source technology ensures maximum control and flexibility.

Special features

#1 Shared workspaces

Secure storage of files in independent team or project areas prevents data loss when users change. Thanks to flexible rights management, teams can manage their workspace autonomously and efficiently.

#2 Real-time collaboration

Thanks to the integrated office suite and efficient sync technology, teams can edit documents simultaneously and without delay. Real-time notifications promote transparency, redundancies are avoided and productivity is increased.

#3 Search and smart filters

Full-text and metadata searches enable quick retrieval of files and content, while tags promote intuitive organization of data and efficient processes.

#4 Big scale

OpenCloud enables the efficient handling of large amounts of data and users, and ensures smooth handling of large files thanks to Delta Sync and error resistance during transfers.

#5 On-premises or SaaS

Installed digitally sovereign on-premises or securely hosted by our selected partners. The option of regional data storage ensures full control and data ownership – and meets national data protection requirements.

#6 Security by design

OpenCloud offers comprehensive security through encryption, flexible access rights and two-factor authentication. Combined with secure versioning against ransomware and GDPR compliance, the platform enables the highest data protection and security standards.
